

Take control of your energy with insights from

## SOLCENTRE

With Allume's monitoring portal, SolCentre, you'll be able to understand:

- ✓ How much **electricity** you're using
- ✓ How much **solar energy** you're being allocated
- ✓ How much **surplus solar** you're exporting back into the grid
- ✓ How to maximise the value of your solar by adapting your behaviour to use energy at the right time

## What is SolShare?

SolShare is a world-first, Aussie-made technology that unlocks solar energy for apartments. The SolShare divides energy from a single rooftop solar system amongst multiple apartments within the same building.

The 'dynamic sharing algorithm' ensures energy is shared fairly between all the tenancies, so each apartment gets a fair portion of clean, affordable energy each month.

**How to get access to the portal?** Speak to your solar installer to get access once your SolShares are installed.
